Queue GetOrders

This function sends a signal to the local Pckasse installation at the customers site and tells it to do a getOrders call against the webshop.

https://min.pckasse.no/QueueGetOrders.aspx?licenceno=x

x is the Pckasse licence number

It returns the following http status codes

200	Signal received, but some of the databases failed. Check individual status codes in the JSON string returned (see next page)
201	All databases with this licence number have received the signal and acted.
400	Something wrong with the parameters (Forgot / illegal licence no. etc)
500	Server error of some sort
502	Bad response from Pckasse
503	No response / Pckasse is not started at customers site / server down
504	Timeout

Status codes for Individual databases is the same (201 – All good, 200 – Check message)

Actions from caller based on status code

201	All good! 😊
200	Check OkCount, FailedCount and individual database status codes.
4xx	Do not try again without fixing your parameters
5xx	Try again in a little while

Multiple Databases with the same Licence number

Specify Db if you only want to signal a specific database.

https://min.pckasse.no/QueueGetOrders.aspx?LicenceNo=x&Db=y

When to call

Do NOT call QueueGetOrders with a timer. (Ex every 15 minutes.)

Call it after the customer has paid and the order is ready to be downloaded

JSON

4xx and 5xx

```json
{
        "error": "Some description"
}
```

2xx

```json
{
        "OkCount": 0,
        "FailedCount": 1,
        "DbResults": [
                {
                        "LicenceNo":  1000,
                        "Server": "TestServer",
                        "Database": "TestDatabase",
                        "Name": "Demo butikk",
                        "Name2": "",
                        "StatusCode": 200,
                        "Message": "Webshop not activated (DESKTOP-5D26GES, PCKasse, 3.1.5.71)"
                }
        ]
}
```
